

Die-cutting station

The most advanced technology for die-cutting

Die-cutting stations designed to fit each press and each material. From compact units to complete lines, with pressure control by gauges or hydraulic servomotor.

Made to measure

NO TWO ARE THE SAME

All kinds of materials

They adapt to the material you work with, whatever its thickness or finish.

Any size

FROM COMPACT UNITS TO COMPLETE LINES

All kinds of industry

Labels, pharmaceuticals, automotive, food. The design is adapted to the sector.

2 pressure systems

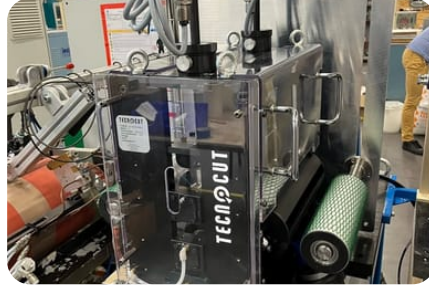

GAUGES OR HYDRAULIC SERVOMOTOR

Custom accessories

Pressure gauges, bearer wipers, E-Diffsystem or waste extraction.

MADE BY US

No two stations alike

IN-HOUSE MANUFACTURING

Designed and assembled in Barcelona

From drawing to final assembly, everything happens in our own facilities. That is why we can adapt it to your press, not the other way round.

HOW IT'S CONFIGURED

Each station adapts to what is needed

01

From compact units to entire lines

We make small units that fit on a table and large stations integrated into a production line. The web width and the frame are calculated for your press.

02

Gauges or hydraulic servomotor

The pressure on the tool is controlled with mechanical gauges, or with a hydraulic servomotor when more precision and repeatability between jobs is needed.

NEXT STEP

Tell us about your press

With the make and model of your press, the web width and the material you die-cut, we will prepare a technical proposal.
